IDENTIFIERS	*Maryland

ABSTRACT

Data concerning the places of residence of students who were enrolled in Maryland colleges during fall 1982 are presented, along with a brief narrative section. The information is intended primarily for use as a reference to study the enrollment patterns of the residents of the state's major political subdivisions at Maryland institutions. Of the 233,985 students in attendance, a place of residence was reported for 233,240. The statistical tables indicate campus enrollment patterns of residents of Maryland counties and Baltimore City, out-of-state students, and foreign students. Additional tables cover enrollment by race, sex, and place of residence, as well as undergraduate participation rates for Maryland political subdivisions for 1978, 1980, and 1982. Enrollments are shown by level of study and full-time/part-time status. New full-time freshmen are shown separately. In addition to the actual numbers of students enrolled on each campus, a percentage distribution is shown by campus and for selected groups of institutions. For each of the state's major political subdivisions, summary tables show the percentages of enrolled residents in attendance at the local community college, the most frequently attended public four-year campus, and the most frequently chosen independent institutions. Undergraduate Participation Rates for Maryland Political Subdivisions 1978, 1980, and 1982 77

This report provides a variety of information concerning the places of residence of students who were enrolled in Maryland institutions of higher education during the fall of 1982. It is intended primarily for use as a reference to study the enrollment patterns of the residents of the State's major political subdivisions at Maryland institutions. In light of the increasing frequency with which this information has been requested the SBHE anticipates publishing updated versions of the basic enrollment-by-residence tables contained in this report each spring.

Throughout this report a student's residence is defined as the permanent place of residence at the time of application to the institution, which is the definition the Board uses in its data collection system. A known place of residence is available for virtually all students who enrolled in Maryland institutions in Fall 1982. Of the 233,985 students in attendance, a place of residence was reported for 233,240 - 99.7%.

Some highlights of the data are summarized below.

Campus Enrollments by Place of Residence

The tables in Appendix A show for each Maryland county and Baltimore City the campuses on which their residents were enrolled in Fall 1982. Also in Appendix A are tables showing the enrollment patterns for out-of-State and foreign students. In each case enrollments are shown by level of study and full-time/part-time status. New full-time freshmen are shown separately. In addition to showing the actual numbers of students enrolled on each campus in each of these categories, a percentage distribution is shown by campus and for selected groups of institutions.

Table 1, derived from the tables in Appendix A, shows for each of the State's major political subdivisions the percentages of enrolled residents in attendance at: (1) the local community college, (2) the most frequently attended public four-year campus, and (3) the most frequently chosen independent institution. The general pattern is for the largest percentage of students to be enrolled at the community college located in or serving a given jurisdiction (median - 50%); and for the second largest percentage to be enrolled at a public four-year campus (median - 13%). Typically if there is a public four-year institution located near a given jurisdiction, it is the second most frequently-attended campus by that jurisdiction's residents. If one does not exist, UMCP usually is the second most frequently attended campus for residents of that jurisdiction. However, there are both variations of and

TABLE 1
INSTITUTIONS MOST FREQUENTLY ATTENDED BY

Baltimore City	28%	Towson-12%	Johns Hopkins-6%
Median	50%	13%	2.5%

*Less Than 0.5 Percent

exceptions to this pattern mainly as a result of the degree of access a given subdivision has to different types of institutions.

Some Variations.

*Cecil, Charles, and Washinton Counties have exceptionally high percentages of their enrolled residents in attendance at community colleges - over 65% in each case. At the same time they have only 8% or less of their enrolled students attending UMCP, the second most frequently-chosen campus by their residents. Each jurisdiction shares the characteristics of having a community college within its boundaries but no public four-year institution nearby.

*Montgomery and Prince Georges Counties, with good access to their own community colleges and to UMCP have near or above-average percentages of attendees at their community colleges along with well above-average percentages of enrollees attending UMCP - the campus chosen second most frequently by their residents.

*The availability of a variety of types of institutions in the Baltimore area is reflected in the fact that there tends to be less difference than elsewhere in the State among the percentages of enrollees attending the most frequently chosen community college, public four-year institution, and independent institution. This is true for Baltimore City and Baltimore, Carroll, Harford, Howard Counties.

Some Exceptions.

*Frederick and Kent Counties do not have a public four-year campus located nearby. However, they both have an independent four-year institution within their boundaries. As a result they are the only jurisdictions in the State in which the second most frequently chosen institution is in the independent, rather than the public, sector. Both have percentages of enrollees attending their respective community colleges at or above the State median.

*For only three counties - Somerset, Wicomico, and Worcester - do the percentages of enrollees attending the most frequently-chosen public four-year institution exceed those attending the most-frequently chosen community college. Forty percent of Somerset's enrollees attend UMES; 60% and 54% of Wicomico's and Worcester's enrollees, respectively, attend Salisbury. All have less than 20% of their enrollees at Wor-Wic Tech.

Enrollments by Residence, Race and Sex

The tables in Appendix A are available by race and sex but have not been included in this report because of their volume. Copies can be obtained by request. This report contains summaries of these detailed tables.

Table 2 shows the percentage of Maryland residents in selected racial categories and by sex enrolled in various types of institutions. Appendix B contains this same information on a county-by-county basis. Overall and in each racial/sex category there are higher percentages of students enrolled in public two-year institutions than in public four-year institutions, although the difference for males is very small. Females have the largest difference in enrollments between public two-year and public four-year institutions due primarily to their high rates of enrollment as part-time students on community college campuses. Enrollment rates in independent institutions generally range between 10% and 12%. However, black enrollment rates in the independent sector are considerably lower than this while those for Hispanic students fall between the black and overall enrollment rates.

Because out-of-State students have a much greater tendency to enroll in public four-year institutions than in public two-year institutions, the enrollment rates in public two-year and four-year institutions are equalized or changed in favor of the four-year campuses for most categories of students when out-of-State students are combined with in-State students (see Table 3). Women are an exception although the difference is only about half as large as for in-State students alone.

Out-of-State students also enroll at higher rates in independent institutions than do Maryland residents. This raises the percentage of students enrolled from each race/sex group in the independent sector. The enrollment rate of blacks in the independent sector remains considerably lower than other categories of students despite the addition of out-of-State students.

Participation Rates

Participation rates measure the degree to which a jurisdiction's population attends college or a particular type of college. This differs from the measures discussed above which describe the campuses attended by residents regardless of their tendency to enroll in higher education in general.

Table 4 shows for 1978, 1980, and 1982 the residents in each of the State's major political subdivisions enrolled for undergraduate study in all Maryland institutions as a percentage of that jurisdiction's population in the 18-44 age group. Tables 5 and 6 show comparable information for undergraduate enrollments on two-year and four-year campuses separately. Appendix C contains tables which display participation rates for additional categories of undergraduate students and institutions.

Overall the percentage enrolled for undergraduate study in Maryland institutions increased from 9.12% in 1978 to 9.66% in 1982. There was not a consistent pattern among individual jurisdictions, with fourteen experiencing a change in participation rates of less than one percentage point, three having decreases greater than one percentage point, and seven having increases greater than one percentage point. Few jurisdictions changed their rankings relative to other jurisdictions by much during this period.

*Jurisdictions with the highest overall rates of participation tended to have high rates of attendance at both two-year and four-year campuses. Baltimore, Montgomery, Harford and Howard Counties had the highest total rates of participation in Maryland higher education in all three years (see Table 4). As shown in Table 5 these same four counties also had among the highest participation rates at two-year campuses. Baltimore, Howard, and Montgomery Counties also had among the highest rates of participation at four-year campuses (see Table 6).

*In addition to the four counties with the highest total rates of participation in higher education Allegany, Charles, and Queen Annes Counties exceeded the State average in rate of enrollment at two-year colleges for all three years. At the same time these three were below the State average in participation rates at four-year campuses.

*For four jurisdictions - Baltimore City and Worcester, Wicomico, and Somerset Counties - the situation is just the opposite. All typically have experienced above-average rates of participation in four-year institutions but below average rates in two-year institutions.
